Today, one-third of my patient appointments were virtual. It's convenient for them and more efficient for me.

On a mobile device, I conveniently saw my family physician without taking time off from work or driving across town.

For my referral to a specialist, my doctor discussed my referral options including wait times.

When I had my appointment with the surgeon, he added me to his Novari wait list software and accurately estimated my date of surgery.

After seeing Sam and deciding to proceed to surgery, we simply moved him onto our Novari surgical wait list. A few months later, using our Novari ATC system, we "eBooked" him into the hospital scheduling system.

After surgery and a brief stay in hospital, the hospital staff used the Novari system to send and track my rehab referral.

The Novari eRequest® module can manage both "direct" and "central intake" access models.

The Novari eRequest® module can manage both "direct" and "central intake" access models.

Sam’s referral and all of our eReferrals are always complete and can be accepted with a click of a button.

When I had my appointment with the surgeon, he added me to his Novari wait list software and accurately estimated my date of surgery.
